

ROBOTIC WELDING · ILUO SKILL PATH

Technical Setter Interns

Diego Adair de León Márquez

Universidad Politécnica de Aguascalientes
Mechatronics Engineering · 9th term

Plant tutor: Fernando Robledo

Tenneco Aguascalientes · Clean Air · September 25, 2026

TENNECO

OUR VALUES

WIN

“We must earn the trust of our employees and customers.”

**Nobody hands an intern a welding torch.
You earn it.**

Capable on the floor, not yet on paper

WHERE I STAND

4 of 23

skills I run unsupervised

WHAT HAPPENED

60%

of my hours went to an
integration project

WHAT I NEED

4

commitments, and none of them
cost money

By January 1 I can be certified at Levels I and L.

WHERE I WORK

Few welding cells, and they run stable

PRODUCT

**Exhaust
systems**

PROCESS

**GMAW
(MIG/MAG)**

ROBOTS

Yaskawa

EQUIPMENT

SKS, Miller

So I could not learn by waiting for a breakdown.

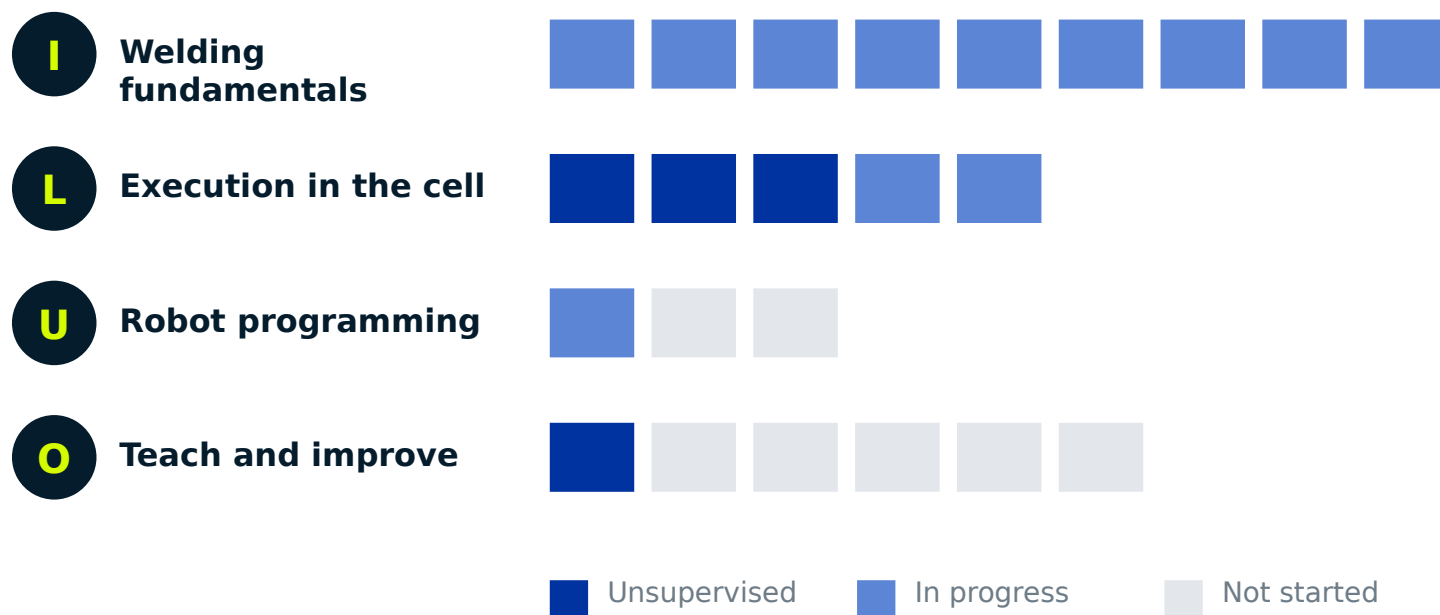

Four levels, and half the hours are for teaching

Every level has its own gate: a written exam, a validation on the floor, a practical exam, an implementation review.

WHERE I STAND TODAY

Four skills unsupervised, none of them validated

WHAT I DO UNSUPERVISED

Consumable changes

Essential variable adjustment

Welding symbol interpretation

Closing ANDON orders

I learned Level I in the cell, not in a classroom. The exam has not happened, so nothing is validated yet.

Not a gap in effort, a gap in structure

WHAT THE PLAN ASSUMED

40 scheduled hours

Classroom, then the cell

One level at a time

WHAT ACTUALLY HAPPENED

Hours driven by demand

The floor from day one

Levels out of order

60% integration project

40% breakdowns and support

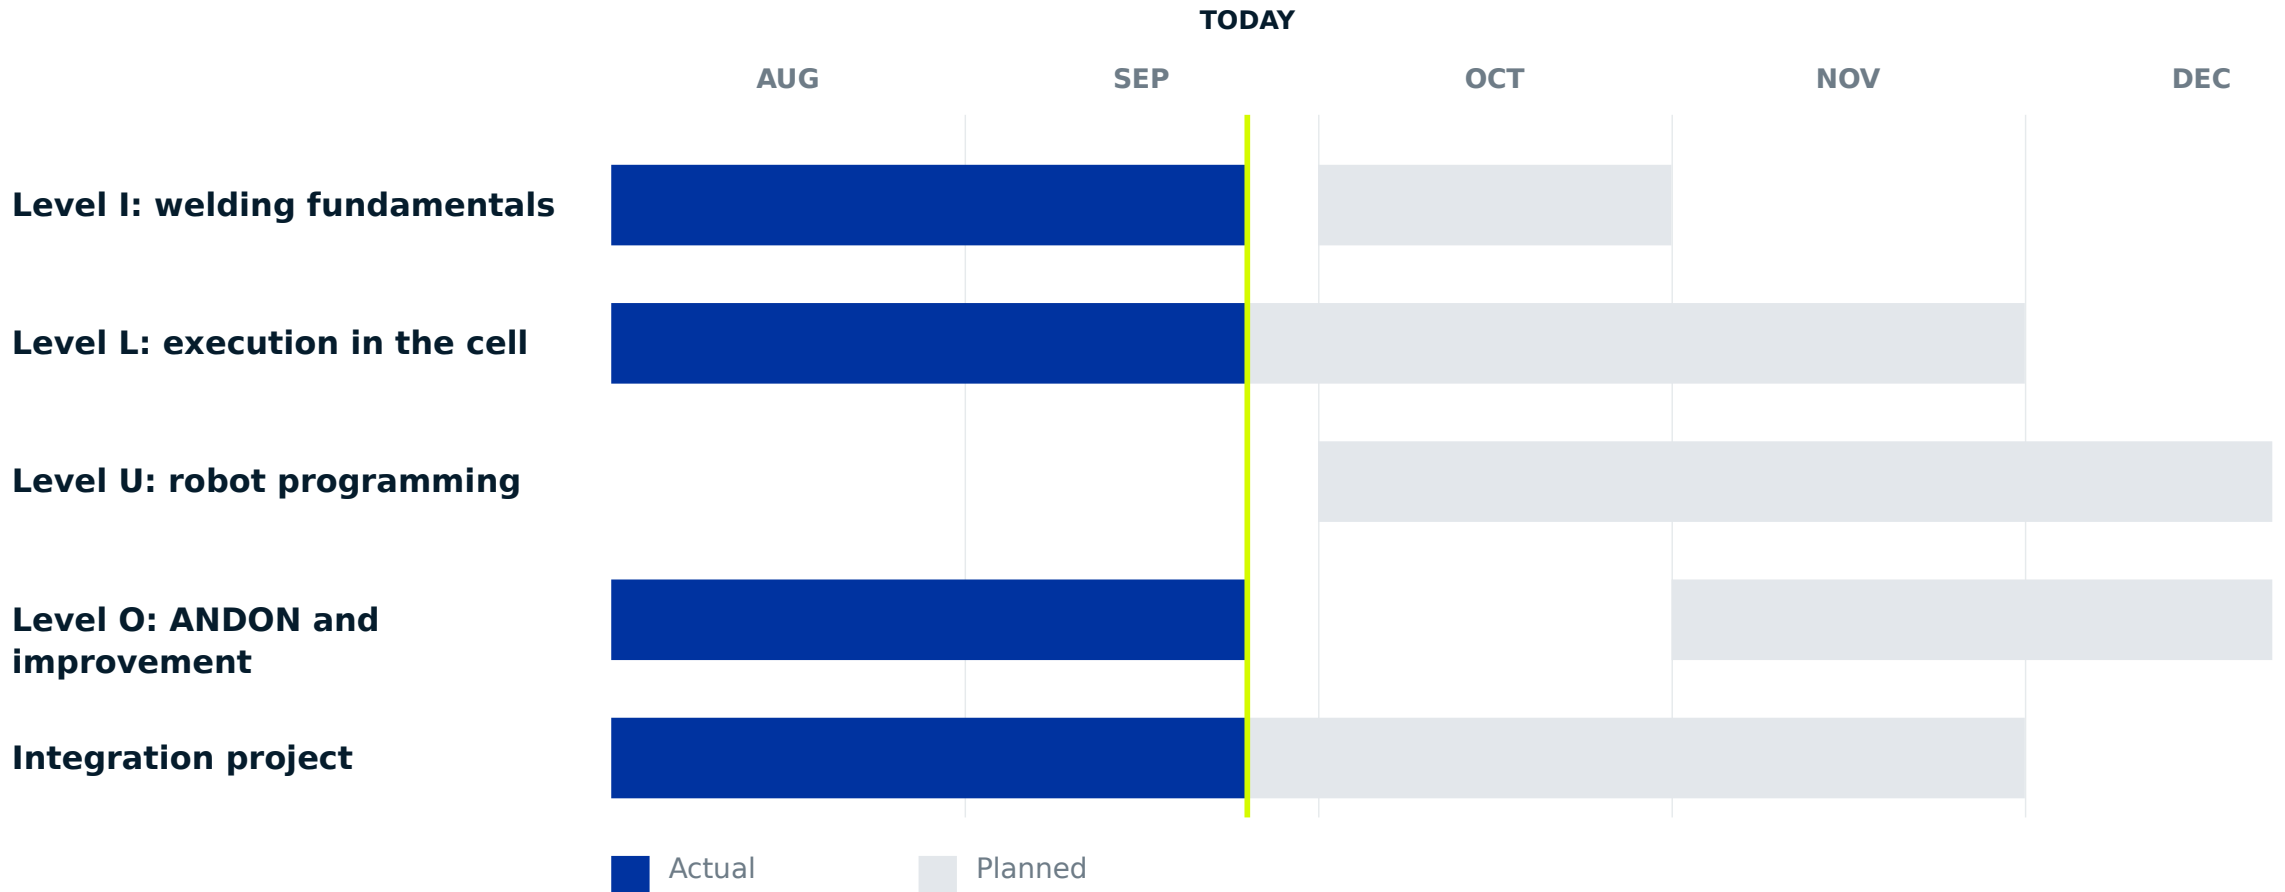

60% of my hours, and none of it on the matrix

WHAT IT IS	[describe the integration in one line]
MY ROLE	[what you own day to day]
WHAT IT TAUGHT ME	[three skills outside the welding matrix]
STATUS	[% complete, next milestone]

TIMELINE

14 weeks left, and Levels U and O are still ahead

August 1, 2026 → January 1, 2027

RESULTS TO DATE

From watching the cell to closing the ANDON

WHAT CHANGED IN EIGHT WEEKS

Consumable change	I watched someone do it	>>	I do it alone
Welding symbols	I could not read a joint callout	>>	I read the print and find the joint
ANDON	I was the one who called it in	>>	I am the one who closes it

Four commitments, and none of them cost money

COMMITMENT	WHAT I NEED	WHEN
1 Level I theory session and written exam Validates Level I	Two half-days on the calendar	October
2 Document parameter validations vs. the WPS Closes Level L	Access to the parameter sheets	Oct - Nov
3 Create one welding program in SKS, supervised Opens Level U	Cell time and supervision	November
4 Take one improvement idea to implementation First Level O evidence	A sponsor for the idea	Nov - Dec

Approve these four and I finish the program certified, not just experienced.

CONCLUSIONS

Informally capable now, certified by January

- 01** I am real at Level L, and honest about Level I.
- 02** The floor taught me faster than the schedule would have.
- 03** Fourteen weeks left, and a plan for them.

Trust first, then the torch. That is how I read WIN.

Thank you
