THE VALUE I IDENTIFY WITH

WIN: trust comes before access

“We must earn the trust of our employees and customers.”

» Nobody hands you the torch

On the floor nobody lets you touch a welding cell because of a job title. You get there by being useful first, and by being useful again the next day.

» I learned by answering, not by asking

Most of what I know came from being the one who showed up when a cell went down — not from waiting for a training session to be scheduled.

» Winning means the line runs

My progress only counts if the cell keeps welding. That is the scoreboard I use on myself, and it is the one this plant is paid on.

Trust is the only currency an intern actually has.

EXECUTIVE SUMMARY

Capable on the floor, not yet on paper

The whole presentation in three numbers

WHERE I STAND

4 / 23

skills I execute unsupervised.
Twelve more are in progress — and
none of it is formally validated yet.

WHAT HAPPENED

60%

of my hours went into an
integration project, not into the
welding matrix. Learning ran on
demand, not on schedule.

WHAT I NEED

4

commitments before January 1.
None of them cost money. Every
one of them costs calendar.

By January 1 I can be certified at Levels I and L — if those four get a date.

Everything after this slide is the evidence behind those three numbers.

WHERE I WORK

Few welding cells, and they run stable

Robotic GMAW — exhaust systems

PRODUCT

Exhaust systems

Clean Air business unit

PROCESS

GMAW

MIG / MAG · robotic cells

ROBOTS

Yaskawa

Most of the cells · one
Fanuc

EQUIPMENT

SKS · Miller

Welding systems and
controls

So I could not learn by waiting for a breakdown.

My hours went wherever the work was — which is exactly why my ILUO progress looks the way it does.

Four levels, and half the hours are for teaching

23 skills · 40 hours · a gate at every level

Each level assumes the one before it. Half of the total hours sit in level O — this program is built to multiply knowledge, not just to certify individuals.

WHERE I STAND TODAY

Four skills unsupervised, none of them validated

4 of 23 unsupervised · 12 in progress · 7 not started

WHAT I DO UNSUPERVISED

- Consumable changes — contact tip, liner, nozzle, diffuser, rollers
- Essential variable adjustment — current, wire feed, voltage, travel speed
- Welding symbol interpretation
- Closing ANDON orders

The honest part

Level I content I picked up in the cell, not in a classroom. The theory session and the 8.0 written exam have not been delivered yet — so none of it is formally validated.

PLAN VS REALITY

Not a gap in effort — a gap in structure

What the program assumed, and what the floor actually delivered

WHAT THE PLAN ASSUMED

40 scheduled hours

Classroom first, then the cell

One level at a time, in order

A formal exam at every gate

WHAT ACTUALLY HAPPENED

Hours driven by demand, not by schedule

Straight to the floor from day one

Levels touched out of order

No formal evaluation yet

60% integration project | **40% breakdowns and support**

HOW MY TIME REALLY SPLIT

Most of my hours went into an integration project with my engineer — work that is not on the welding matrix at all.

Every hour I worked was useful — only the paperwork is missing.

60% of my hours, none of it on the matrix

Real engineering work the ILUO scorecard cannot see

WHAT IT IS	[describe the integration in one line]
MY ROLE	[what you own day to day]
WHAT IT TAUGHT ME	[three skills outside the welding matrix]
STATUS	[% complete · next milestone]

Worked directly with my engineering lead — this is the experience the matrix does not capture.

TIMELINE

14 weeks left, and Levels U and O are still ahead

August 1, 2026 → January 1, 2027

Level I needs a scheduled session. Level U needs supervised cell time. Both are calendar items, not budget items.

RESULTS TO DATE

From watching the cell to closing the ANDON

Eight weeks, measured against the 23-skill matrix

WHAT CHANGED IN EIGHT WEEKS

Consumable change	I watched someone do it	>>	I do it alone
Welding symbols	I could not read a joint callout	>>	I read the print and find the joint
ANDON	I was the one who called it in	>>	I am the one who closes it

Four commitments, no budget — only calendar

Each one produces a document you can audit

COMMITMENT	WHAT IT UNLOCKS	WHEN	WHAT I NEED
1 Sit the Level I theory session and the written exam	Level I formally validated	October	Two half-days scheduled
2 Document 10 parameter validations against the WPS	Closes Level L	Oct - Nov	Access to parameter sheets
3 Create one welding program in SKS, supervised	Opens Level U	November	Cell time and supervision
4 Take one improvement idea to implementation	First Level O evidence	Nov - Dec	A sponsor for the idea

Approve these four and I finish the program certified, not just experienced.

CONCLUSIONS

Informally capable now, certified by January

Three things I want you to take away

01 I am real at Level L, and honest about Level I.

Four skills I execute with nobody watching. But nothing is formally validated yet, and that is the gap that actually matters.

02 The floor taught me faster than the schedule would have.

Demand-driven learning built troubleshooting judgment a classroom does not give you. It just did not produce paperwork.

03 Fourteen weeks left, and a plan for them.

The four commitments take me from informally capable to formally certified before January 1.

Trust first, then the torch. That is how I read WIN.

Thank you
